

The Public Health Agency have embarked on a key piece of work to look at an evidence based service model for safer mobility / fall prevention. A key strand of this work is to understand the range of services being offered by community and voluntary sector organisations as these services make a massive contribution. A short survey has been developed to try to capture some high level information on these services.

The link to the survey can be found below:

[PHA Safer Mobility Survey C&V Sector Organisations 2024](#)

The survey will be open throughout October to give everyone a chance to get involved. Once data has been collected, a workshop will be held where it will be presented. We will share further details on the workshop in due course.
